

Q1. Hello Python

```
print("Welcome to Python")
```

Q2. Personal Introduction

```
print("Name: Dhananjayan")
```

```
print("Age: 21")
```

```
print("College: KRCE")
```

```
print("Department: CSE")
```

Q3. Store Your Name

```
name = " Dhananjayan "
```

```
print(name)
```

Q4. Student Information Using Variables

```
student_name = " Dhananjayan "
```

```
age = 21
```

```
city = "Chennai"
```

```
college = "KRCE"
```

```
print("Student Name:", student_name)
```

```
print("Age:", age)
```

```
print("City:", city)
```

```
print("College:", college)
```

Q5. Different Data Types

```
integer_value = 21
```

```
float_value = 85.5
```

```
string_value = "Python"
```

```
boolean_value = True
```

```
print(integer_value)
```

```
print(float_value)
```

```
print(string_value)

print(boolean_value)
```

Q6. Find the Datatype

```
age = 21

print(type(age))
```

Output:

```
<class 'int'>
```

Q7. Identify Multiple Datatypes

```
name = " Dhananjayan "

age = 21

percentage = 85.5

is_student = True
```

```
print(name, type(name))

print(age, type(age))

print(percentage, type(percentage))

print(is_student, type(is_student))
```

Q8. Get User Name

```
name = input("Enter your name: ")

print("Hello", name)
```

Example Output:

```
Enter your name: Dhananjayan

Hello Dhananjayan
```

Q9. Get User Age

```
age = int(input("Enter your age: "))

print("Age:", age)
```

Q10. Get Percentage

```
percentage = float(input("Enter your percentage: "))
```

```
print("Percentage:", percentage)

print("Datatype:", type(percentage))
```

Example Output:

Enter your percentage: 85.5

Percentage: 85.5

Datatype: <class 'float'>

Q11. Student Basic Information

```
name = input("Enter student name: ")

age = int(input("Enter age: "))

department = input("Enter department: ")

cgpa = float(input("Enter CGPA: "))
```

```
print("Name:", name)

print("Age:", age)

print("Department:", department)

print("CGPA:", cgpa)
```

Q12. Employee Information

```
employee_name = input("Enter employee name: ")

employee_id = int(input("Enter employee ID: "))

age = int(input("Enter age: "))

salary = float(input("Enter salary: "))

experience = float(input("Enter experience in years: "))
```

```
print("Employee Name:", employee_name)

print("Employee ID:", employee_id)

print("Age:", age)
```

```
print("Salary:", salary)
```

```
print("Experience:", experience)
```

Q13. Product Details

```
product_name = input("Enter product name: ")
```

```
product_code = int(input("Enter product code: "))
```

```
price = float(input("Enter price: "))
```

```
weight = float(input("Enter weight in kg: "))
```

```
print("Product Name:", product_name)
```

```
print("Product Code:", product_code)
```

```
print("Price:", price)
```

```
print("Weight:", weight, "kg")
```

Q14. Student Registration

```
student_name = input("Enter student name: ")
```

```
register_number = int(input("Enter register number: "))
```

```
age = int(input("Enter age: "))
```

```
cgpa = float(input("Enter CGPA: "))
```

```
email = input("Enter email: ")
```

```
print("Student Name:", student_name)
```

```
print("Register Number:", register_number)
```

```
print("Age:", age)
```

```
print("CGPA:", cgpa)
```

```
print("Email:", email)
```

Q15. Employee Profile System

```
full_name = input("Enter full name: ")
```

```
employee_id = int(input("Enter employee ID: "))
```

```
age = int(input("Enter age: "))

department = input("Enter department: ")

designation = input("Enter designation: ")

experience = float(input("Enter experience in years: "))

salary = float(input("Enter salary: "))

email = input("Enter email: ")
```

```
print("Full Name:", full_name)

print("Employee ID:", employee_id)

print("Age:", age)

print("Department:", department)

print("Designation:", designation)

print("Experience:", experience)

print("Salary:", salary)

print("Email:", email)
```

Q16. Bank Account Details

```
customer_name = input("Enter customer name: ")

account_number = int(input("Enter account number: "))

account_type = input("Enter account type: ")

age = int(input("Enter age: "))

initial_balance = float(input("Enter initial balance: "))

nominee_name = input("Enter nominee name: ")
```

```
print("Customer Name:", customer_name)

print("Account Number:", account_number)

print("Account Type:", account_type)

print("Age:", age)

print("Initial Balance:", initial_balance)
```

```
print("Nominee Name:", nominee_name)
```

Q17. College Admission Form

```
student_name = input("Enter student name: ")
```

```
application_number = int(input("Enter application number: "))
```

```
date_of_birth = input("Enter date of birth: ")
```

```
age = int(input("Enter age: "))
```

```
department = input("Enter department: ")
```

```
percentage = float(input("Enter percentage: "))
```

```
email = input("Enter email: ")
```

```
phone_number = input("Enter phone number: ")
```

```
print("Student Name:", student_name)
```

```
print("Application Number:", application_number)
```

```
print("Date of Birth:", date_of_birth)
```

```
print("Age:", age)
```

```
print("Department:", department)
```

```
print("Percentage:", percentage)
```

```
print("Email:", email)
```

```
print("Phone Number:", phone_number)
```

Q18. Job Application Form

```
candidate_name = input("Enter candidate name: ")
```

```
candidate_id = int(input("Enter candidate ID: "))
```

```
qualification = input("Enter qualification: ")
```

```
age = int(input("Enter age: "))
```

```
experience = float(input("Enter experience in years: "))
```

```
expected_salary = float(input("Enter expected salary: "))
```

```
email = input("Enter email: ")
```

```
phone_number = input("Enter phone number: ")
```

```
city = input("Enter city: ")
```

```
print("Candidate Name:", candidate_name)
```

```
print("Candidate ID:", candidate_id)
```

```
print("Qualification:", qualification)
```

```
print("Age:", age)
```

```
print("Experience:", experience)
```

```
print("Expected Salary:", expected_salary)
```

```
print("Email:", email)
```

```
print("Phone Number:", phone_number)
```

```
print("City:", city)
```

Q19. Mobile Phone Specification System

```
brand = input("Enter brand: ")
```

```
model = input("Enter model: ")
```

```
ram = int(input("Enter RAM in GB: "))
```

```
storage = int(input("Enter storage in GB: "))
```

```
display_size = float(input("Enter display size: "))
```

```
price = float(input("Enter price: "))
```

```
support_5g = input("Does it support 5G? ")
```

```
print("Brand:", brand)
```

```
print("Model:", model)
```

```
print("RAM:", ram, "GB")
```

```
print("Storage:", storage, "GB")
```

```
print("Display Size:", display_size, "inches")
```

```
print("Price:", price)
```

```
print("5G Support:", support_5g)
```

Q20. Complete Employee Onboarding System

```
full_name = input("Enter full name: ")

age = int(input("Enter age: "))

date_of_birth = input("Enter date of birth: ")

gender = input("Enter gender: ")

employee_id = input("Enter employee ID: ")

department = input("Enter department: ")

designation = input("Enter designation: ")

experience = float(input("Enter experience in years: "))

joining_date = input("Enter joining date: ")

basic_salary = float(input("Enter basic salary: "))

bonus_percentage = float(input("Enter bonus percentage: "))

email = input("Enter email: ")

phone_number = input("Enter phone number: ")

city = input("Enter city: ")

work_from_home = input("Work From Home: ")

laptop_assigned = input("Laptop Assigned: ")

print("\n--- Employee Onboarding Details ---")
```

```
print("Full Name:", full_name)
```

```
print("Age:", age)
```

```
print("Date of Birth:", date_of_birth)
```

```
print("Gender:", gender)
```

```
print("Employee ID:", employee_id)
```

```
print("Department:", department)
```

```
print("Designation:", designation)
```

```
print("Experience:", experience)
```

```
print("Joining Date:", joining_date)
```

```
print("Basic Salary:", basic_salary)
```

```
print("Bonus Percentage:", bonus_percentage)
```

```
print("Email:", email)
```

```
print("Phone Number:", phone_number)
```

```
print("City:", city)
```

```
print("Work From Home:", work_from_home)
```

```
print("Laptop Assigned:", laptop_assigned)
```

Q21. Smart Classroom Registration

```
student_name = input()

register_number = input()

year = int(input())

section = input()

department = input()

attendance_percentage = float(input())

lab_required = input() == "True"

classroom_number = int(input())

print("----- CLASSROOM REGISTRATION -----")

print("Student Name:", student_name)

print("Register Number:", register_number)

print("Year:", year)

print("Section:", section)

print("Department:", department)

print("Attendance Percentage:", attendance_percentage)

print("Lab Required:", lab_required)

print("Classroom Number:", classroom_number)
```

Q22. Digital Library Book Issue System

```
member_name = input()

member_id = input()

book_title = input()

book_id = input()

author_name = input()

number_of_pages = int(input())

issue_date = input()

ebook_available = input() == "True"
```

```
print("----- LIBRARY ISSUE RECEIPT -----")

print("Member Name:", member_name)

print("Member ID:", member_id)

print("Book Title:", book_title)

print("Book ID:", book_id)

print("Author Name:", author_name)

print("Number of Pages:", number_of_pages)

print("Issue Date:", issue_date)

print("E-Book Available:", ebook_available)
```

Q23. Food Delivery Order Profile

```
customer_name = input()

order_id = input()

restaurant_name = input()

food_item = input()

quantity = int(input())

delivery_address = input()

payment_mode = input()

delivery_required = input() == "True"

print("----- ORDER PROFILE -----")

print("Customer Name:", customer_name)

print("Order ID:", order_id)

print("Restaurant Name:", restaurant_name)

print("Food Item:", food_item)

print("Quantity:", quantity)

print("Delivery Address:", delivery_address)

print("Payment Mode:", payment_mode)
```

```
print("Delivery Required:", delivery_required)
```

Q24. Internship Application Profile

```
candidate_name = input()
```

```
application_id = input()
```

```
college_name = input()
```

```
degree = input()
```

```
specialization = input()
```

```
current_year = int(input())
```

```
cgpa = float(input())
```

```
internship_mode = input()
```

```
duration = int(input())
```

```
resume_submitted = input() == "True"
```

```
print("----- INTERNSHIP APPLICATION -----")
```

```
print("Candidate Name:", candidate_name)
```

```
print("Application ID:", application_id)
```

```
print("College Name:", college_name)
```

```
print("Degree:", degree)
```

```
print("Specialization:", specialization)
```

```
print("Current Year:", current_year)
```

```
print("CGPA:", cgpa)
```

```
print("Internship Mode:", internship_mode)
```

```
print("Duration in Months:", duration)
```

```
print("Resume Submitted:", resume_submitted)
```

Q25. Smart Parking Registration

```
driver_name = input()
```

```
vehicle_number = input()
```

```
vehicle_type = input()
```

```
parking_slot = input()

entry_time = input()

parking_floor = int(input())

number_of_passengers = int(input())

monthly_pass = input() == "True"

print("----- SMART PARKING -----")

print("Driver Name:", driver_name)

print("Vehicle Number:", vehicle_number)

print("Vehicle Type:", vehicle_type)

print("Parking Slot:", parking_slot)

print("Entry Time:", entry_time)

print("Parking Floor:", parking_floor)

print("Number of Passengers:", number_of_passengers)

print("Monthly Pass:", monthly_pass)
```

Q26. Online Exam Registration System

```
student_name = input()

exam_id = input()

subject = input()

register_number = input()

college_name = input()

exam_date = input()

exam_duration = int(input())

online_mode = input() == "True"

hall_ticket_number = input()

print("----- ONLINE EXAM REGISTRATION -----")

print("Student Name:", student_name)
```

```
print("Exam ID:", exam_id)

print("Subject:", subject)

print("Register Number:", register_number)

print("College Name:", college_name)

print("Exam Date:", exam_date)

print("Exam Duration:", exam_duration, "minutes")

print("Online Mode:", online_mode)

print("Hall Ticket Number:", hall_ticket_number)
```

Q27. Employee Asset Allocation Form

```
employee_name = input()

employee_id = input()

department = input()

laptop_brand = input()

laptop_model = input()

asset_id = input()

ram = int(input())

storage = int(input())

laptop_assigned = input() == "True"

print("----- ASSET ALLOCATION -----")

print("Employee Name:", employee_name)

print("Employee ID:", employee_id)

print("Department:", department)

print("Laptop Brand:", laptop_brand)

print("Laptop Model:", laptop_model)

print("Asset ID:", asset_id)

print("RAM:", ram, "GB")

print("Storage:", storage, "GB")
```

```
print("Laptop Assigned:", laptop_assigned)
```

Q28. Hotel Check-In Registration

```
guest_name = input()
```

```
booking_id = input()
```

```
room_number = int(input())
```

```
room_type = input()
```

```
number_of_guests = int(input())
```

```
check_in_date = input()
```

```
check_out_date = input()
```

```
breakfast_included = input() == "True"
```

```
payment_mode = input()
```

```
print("----- HOTEL CHECK-IN -----")
```

```
print("Guest Name:", guest_name)
```

```
print("Booking ID:", booking_id)
```

```
print("Room Number:", room_number)
```

```
print("Room Type:", room_type)
```

```
print("Number of Guests:", number_of_guests)
```

```
print("Check-In Date:", check_in_date)
```

```
print("Check-Out Date:", check_out_date)
```

```
print("Breakfast Included:", breakfast_included)
```

```
print("Payment Mode:", payment_mode)
```

Q29. Tech Conference Registration

```
participant_name = input()
```

```
registration_id = input()
```

```
organization = input()
```

```
job_role = input()
```

```
experience = float(input())
```

```
ticket_type = input()

conference_date = input()

workshop_selected = input()

email = input()

print("----- TECH CONFERENCE BADGE -----")

print("Participant Name:", participant_name)

print("Registration ID:", registration_id)

print("Organization:", organization)

print("Job Role:", job_role)

print("Experience in Years:", experience)

print("Ticket Type:", ticket_type)

print("Conference Date:", conference_date)

print("Workshop Selected:", workshop_selected)

print("Email:", email)
```

Q30. IoT Device Registration System

```
customer_name = input()

device_id = input()

device_name = input()

device_type = input()

location = input()

wifi_enabled = input() == "True"

installation_date = input()

device_version = input()

warranty_period = int(input())

device_active = input() == "True"

print("----- IoT DEVICE REGISTRATION -----")
```

```
print("Customer Name:", customer_name)

print("Device ID:", device_id)

print("Device Name:", device_name)

print("Device Type:", device_type)

print("Location:", location)

print("Wi-Fi Enabled:", wifi_enabled)

print("Installation Date:", installation_date)

print("Device Version:", device_version)

print("Warranty Period in Years:", warranty_period)

print("Device Active:", device_active)
```
